Introduction

The Quality Assurance Recert Report is designed to help agencies manage patient care and identify potential data integrity problems. This report:

- Highlights improvement, stabilization, and decline for each patient on key quality and performance measures at the time of recertification
- Provides an inter-assessment view of clinician and patient-level data
- Helps to identify care plan needs and whether additional resources/disciplines are needed

Quick View of Report Specifications

Report Structure

Grouping and Sorting

This report is grouped by clinician. Clinicians are sorted alphabetically. The clinician name is collected and displayed based on information transmitted from most MIS vendors. If OCS does not collect clinician name from the MIS vendor used by an organization the reports will show a clinician of Unknown.

By default, patients under each Clinician are also sorted alphabetically; however users can sort by any column by clicking the up/down arrows within the column header. A down arrow means the column is sorted in ascending order. An up arrow means the column is sorted in descending order. Note: that sorting happens within each clinician's patients rather than for all patients.
